Do we deliver late, or promise wrong?

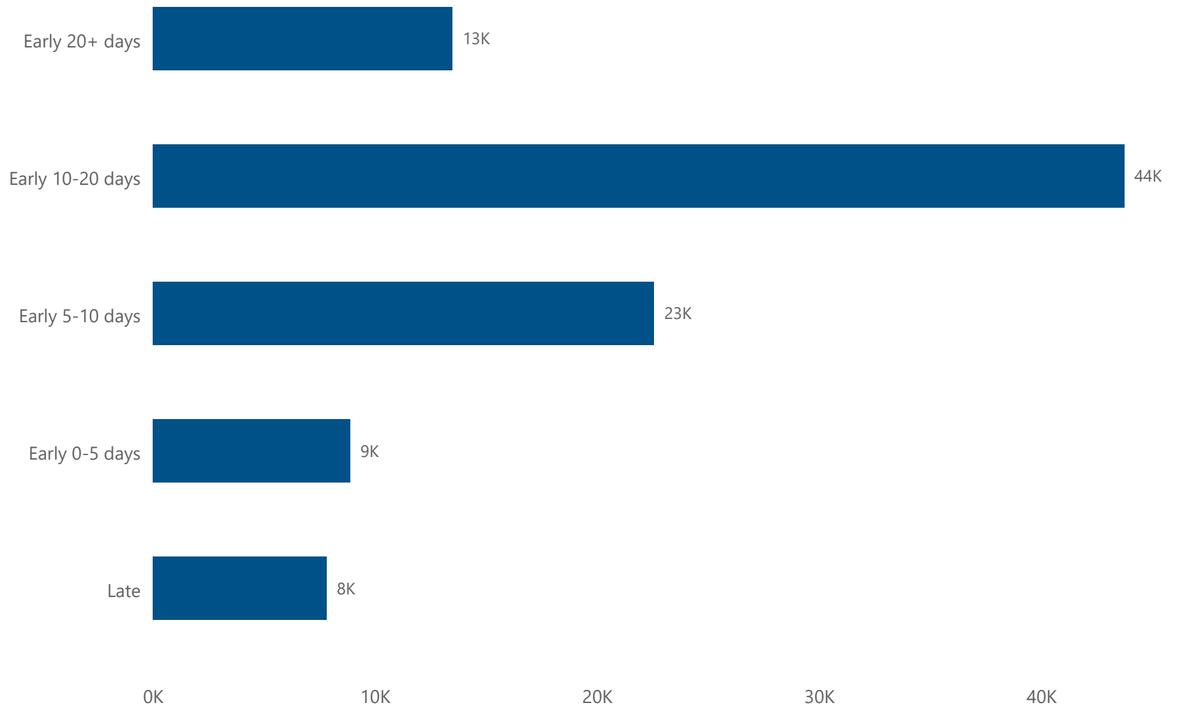

Total Orders
99K

Delivered Orders
96K

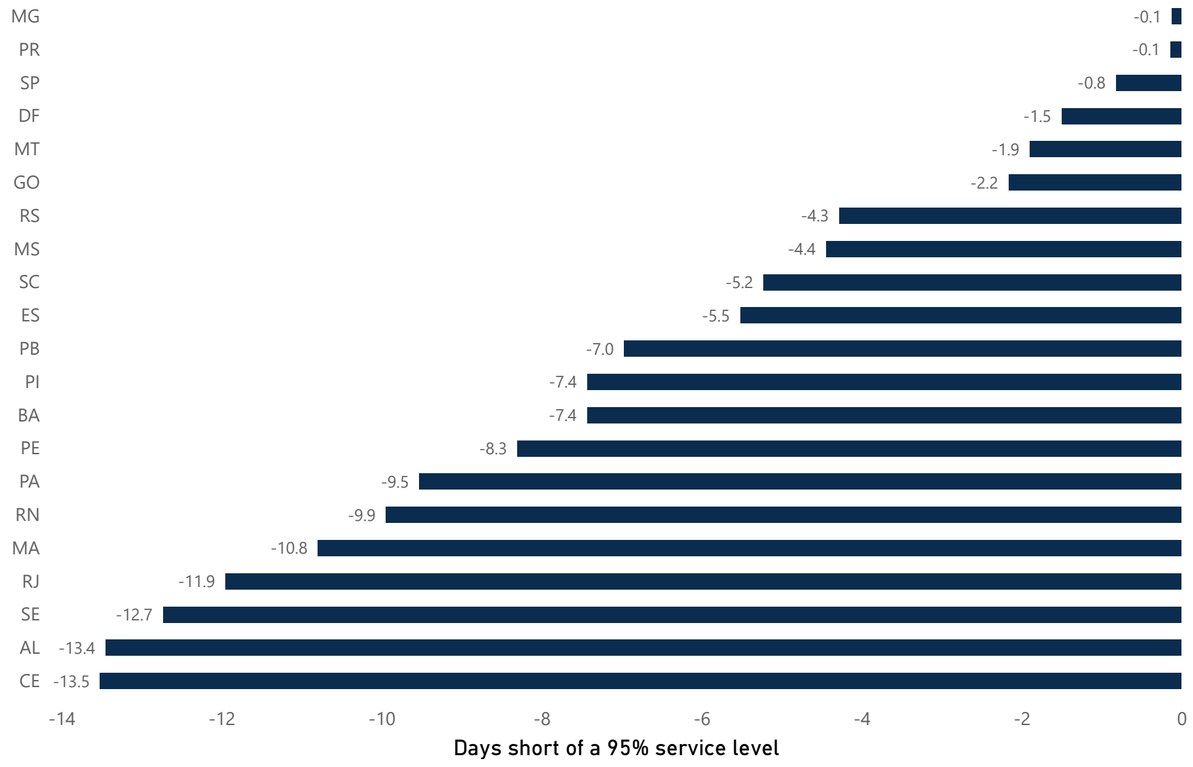

Late %
8.1%

Median Promise Error
-11.9

92% of orders arrive early — most by 10 to 20 days

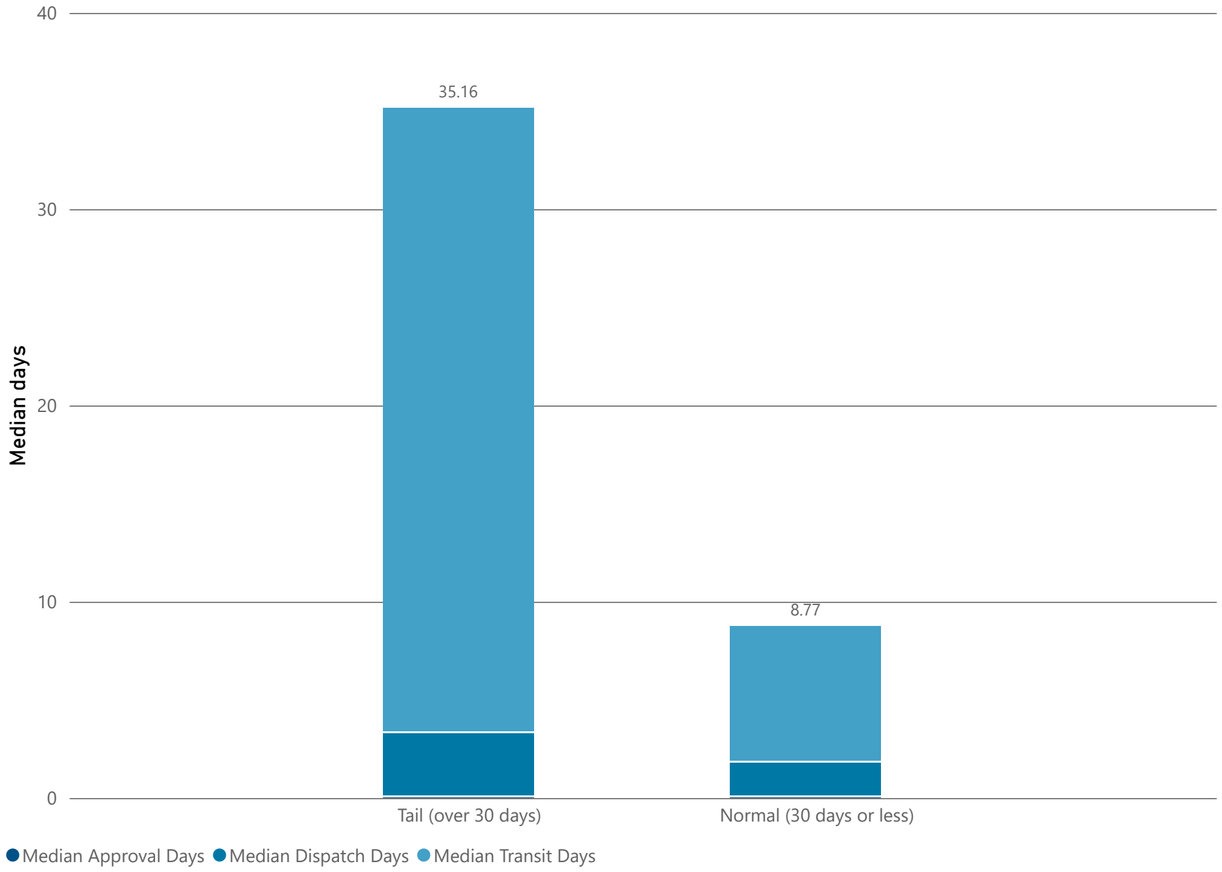

Every state under-promises — none reaches a 95% service level

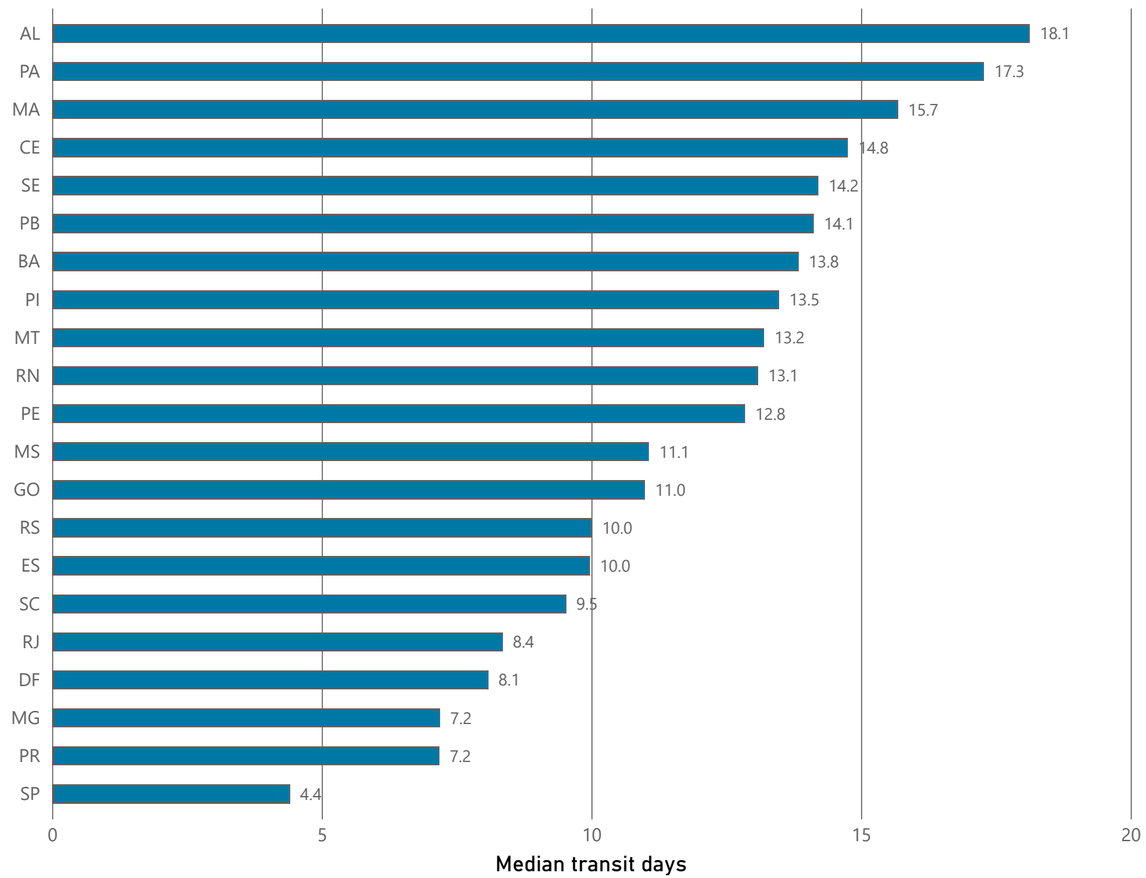

The delay is one carrier leg, in one part of the country

Transit is 94% of the extra time on slow orders

Transit is 4x slower in the north and north-east than in São Paulo

Fix the carrier leg, not the promise. 94% of the excess sits in transit, concentrated in the north and north-east. The promise is already too short for a 95% service level in every state shortening it further only trades reliability for checkout appeal.

Late orders average 2.6 stars against 4.3 for early ones, 54% leave 1 or 2 stars.
The tail costs reputation, not just days.

Olist Brazilian e-commerce · 99,441 orders, Sep 2016 – Aug 2018 · Analysis: Mia Deita · github.com/deitamia/olist-delivery-promise
